

Kevin Zhu

I felt the first day of math was different compared to my previous courses like Algebra 2. The pace was faster, but I felt I was able to grasp the knowledge that was taught.

Taehyun Kim

good

Cynthia Sun

Hi Mr. Chao. I thought the first day of class was similar to Advanced Pre-Calc classes last year. It felt good to go over things that we learned in the past again.

Levin Zhu

yesterdaychallenging but manageable, i think this course will stimulate my thinking as well as improve my mathematical skills

Chou CH Jonathan

I look forward to learning more about math this year.

Eui Chel (Eddy) Kim

The first class helped me remember some things that I forgot about during the summer break. It also taught me some things that i didn't know about before. Therefore i believe the first class was great.

Steven Shi

I think that the first day was challenging to some extent because we had to think in different ways and use logic more than just formulas.

Frank Wu

Taking Advanced Precalc last year was a huge advantage and definitely made the first class a lot easier and less frustrating. I felt the class this year, even though we had similar material last year, was just a small step up and was a good start to the year.

Dan Ni

I thought the first day was strikingly similar to the first day of Pre-Calc last year, since I believe we started out with functions as well. This time though, it was much easier as most of it was review.

Ian Lee

I think the questions we do in class are much harder than I expect, but they are not out of my ability, and the homework is much easier compare to class works.
